

FuelBox

A rectangular double-walled mobile fuel storage tank with a storage capacity of 450 to 3000 liters.

- Features:**
- Corner pieces with integrated lifting eyes.
 - Robust and stackable.
 - Galvanized manhole cover.
 - Reinforced lower edge of the IBC, this is 8mm thick and acts as a lower bumper.
 - Robust top made of 5mm thick sheet steel.

Special versions: FuelBox Compact and FuelBox XL

FuelBox Compact: Compact in design and offers sufficient space under the valve for various single and double pump sets.

FuelBox XL: Characterized by extra space between the tank and the Drip tray. This provides more space (30cm) for a larger pump set. This space can also be used as additional storage space for, for example, hoisting belts, chains or other tools. Should the combination of diesel and AdBlue® be chosen, a stainless steel tank is integrated into the Fuel Box XL for the storage of AdBlue®.

Your own RAL color

The FuelBox comes standard in RAL 7016, but can also be supplied in any other standard RAL color. Optionally, the drip tray is available galvanized.

Certifications
ADR, Kiwa, Vlare and UN.
